

EASWARI / AVINA

Production Team Manual · Panduan Pasukan Pengeluaran

Bilingual: English (Part 1) and Bahasa Malaysia (Bahagian 2).

Wording draft — screenshots to be added at each [Screenshot] marker.

PART 1 — ENGLISH

EASWARI / AVINA — Production Team Manual

Full process, step by step. Read the stages in order. Each [Screenshot] marker is where a picture will be added later.

0. Getting started (everyone)

Logging in

1. Open **production.srrieaswari.com** in your browser (on phone, use Safari).
2. Enter your **username** and **password** -> **Login**.
3. You land on the **Dashboard**. The blue bar at the top is the menu:

Dashboard · Pending Changes · Discussion · Sales · Receiving · Production · Reports · Setup, with the **bell** and your name on the right.

4. The chip near your name shows your access: a **factory code** (e.g. AVINA 101) or **Head Office** (sees everything).

[Screenshot: Dashboard after login]

What you can see/do

- You only see and edit work for **your own location(s)**.
- Head Office can see all factories and approves changes.

Phone notifications (office phone)

1. Open the site in **Safari** -> **Share** -> **Add to Home Screen**.
 2. Open the app from the **Home-Screen icon** (not a Safari tab).
 3. Tap -> **Enable on this phone** -> **Allow**.
 4. You'll now get alerts even when the app is closed.
-

1. Sales Orders (Office)

Where: Sales -> Sales Orders. **Who:** Office. **When:** a customer order arrives.

A. Upload the order

1. Click **Choose File**, pick the customer's **Sales Order PDF**, click **Upload**.
2. The system reads the order and lists it under **Uploaded Documents** with a status (usually **Review**).

[Screenshot: Sales Orders upload + uploaded documents list]

B. Check the lines

1. Find the document (use **Search file or item**, or the **Location / Status / Issues** filters).
2. Click **View Lines** to see each item, quantity, delivery date, location and status.
3. Use the line **Search** box or the per-column filters to find an item.

[Screenshot: Lines view of a document]

C. Fix a line if needed

- **Before that location has confirmed:** staff can change **Location** and **Delivery Date** directly (no approval). Click **Edit** on the line. Head Office can change any field.
- **After it's confirmed:** click **Request change** — Head Office approves it.
- To move an order to another site, change the **Location** (the factory updates automatically).

[Screenshot: Edit this line panel]

D. Urgent orders

- Click **Mark urgent** on the document. It turns red and stays flagged through the whole journey, and the location is notified.

E. Confirm to production

1. Scroll to **Confirm to production**.
2. Each location clicks **Confirm <factory> lines**. Those lines are pushed to that factory's **Order Board**.
3. A document can't be confirmed while it has pending changes.

[Screenshot: Confirm to production section]

2. Order Board — plan production (Factory)

Where: Production -> Order Board. **Who:** Factory planner. **When:** after lines are confirmed.

1. Confirmed orders appear as **batches**. Tabs at the top: **not requested yet / requested / in progress / done**. Filter by **Factory**, delivery date, or **Sort**.
2. Tick **Combine same item to run together** to group identical items into one run.

[Screenshot: Order Board with batches]

Raise the materials

3. Click **Materials** on a batch (or a combined group).
4. Set the **Run mode**: *Auto machine* (roll) or *Manual* (pieces) — this decides which packaging is needed.
5. The table shows **Required vs Stock vs Shortfall**.
6. **Standard order:** click **Raise Material Request**.
7. **Ad-hoc order (different packaging, e.g. 1kg vs 5kg plastic):** tick **Customise materials (ad-hoc)** -> edit quantities, **remove** a line, or **add** a material (e.g. the 5kg plastic) -> **Raise ad-hoc request**. This does **not** change the saved recipe.

[Screenshot: Material requirements modal + ad-hoc toggle]

If you see ! No BOM set: the recipe is missing — set it up in Reports -> BOM first.

3. Material Requests & the warehouse

Where: Receiving -> Material Requests.

Factory / Head Office — release to the warehouse

1. New requests collect under **Waiting to release** for each factory.
2. When ready, click **Release to warehouse ->**. This sends one fixed **pick run**; anything raised later waits for the next release.

[Screenshot: Waiting to release + Release button]

Raise materials by hand (ad-hoc / not from a batch)

1. Click **+ Request a material manually**.
2. (Optional) **Load from a product's recipe** — pick the product + units to pre-fill its recipe, then swap the plastic / edit quantities.
3. Or add items one by one (search the item, enter qty, **+ Add item**).
4. **Submit request** — it joins Waiting to release.

[Screenshot: Manual request form]

Warehouse — pick and record

1. Use the **Location** and **Status** dropdowns to find runs (New / SO entered / Partially received / Fully received).
2. For each released run: type the **SO number**, click **Save**.
3. Pick the whole run in one trip; type the **total received** for each material — it splits back across the original requests automatically.

[Screenshot: Released pick run, warehouse view]

4. Goods Received (Factory / Warehouse)

Where: Receiving -> Goods Received. **When:** a delivery arrives.

1. Click **Choose File**, upload the **Delivery Order (DO) PDF**, **Upload**. The system reads the lines.
2. Click **View Lines** (use the item **Search** if the list is long).
3. For each line: **tick QC**, add a **photo** (optional for Head Office), then **Receive**. Partial is fine — receive some now, the rest later. Received items **book into stock**.
4. Bag/carton quantities convert to KG automatically. If asked, set **KG per bag** on the item.
5. Wrong quantity? Use **Correct received quantity**. Wrong code? Use **Request edit**.

[Screenshot: Goods Received lines with QC/photo/Receive]

5. Labels (Factory)

Where: Receiving -> Labels.

1. A label appears once its order's raw materials are received (stage **Material received**).
2. Enter the **batch number / expiry** and the **quantity to print**, attach a **photo** of the printed label -> stage becomes **Printed**.
3. Tick the labels -> **Send** -> then **Receive -> stock** when they arrive (books label stock).
4. One-off label? **+ Request a label manually** (choose label, product, qty, batch, expiry).

[Screenshot: Labels pipeline]

6. Packing Schedule (Factory)

Where: Production -> Packing Schedule.

1. Sections: **Scheduled to pack -> Ready to pack -> Waiting for materials.**
2. Set each batch's **pack line, date, and run mode.**
3. Click > **show materials** to see, per material, the **stock batches to use** (oldest expiry first).
Batches reserved for that run are marked * — **use these first.**

[Screenshot: Packing Schedule + show materials]

7. Record production (Line / QC)

Where: open the batch's **Packing & Finished Goods Inspection Record.**

1. **Date, Area/Line, Code, Product** come from the Packing Schedule and are **locked**. If any is wrong, fix it in **Packing Schedule** (the date shows red if it isn't today).
2. **Production timer: Start** at the beginning, **Pause** for breaks, **Stop** at the end.
3. **Materials used:** the **batches & quantities are pre-filled** from what was allocated. Adjust **Qty used**; use **+ add batch** if one batch wasn't enough.
4. Fill the quality checks (sealing samples, CCP2, metal detector, etc.).
5. Enter **Quantity produced -> Record production**. This **consumes the raw materials from stock** (earliest expiry first).
6. If **food loss > 5%**, it's flagged to Head Office automatically.

[Screenshot: Inspection record — header, timer, materials used]

8. Delivered to warehouse / Delivery Orders

Where: Sales -> Delivery Orders.

1. Finished goods are dispatched to the warehouse here. When delivered, the location is notified and the order line moves to **Delivered to warehouse**.

[Screenshot: Delivery Orders]

9. Buying from suppliers (Office)

Where: Sales -> Supplier (to order).

1. **To order** tab: items routed to SUPPLIER, grouped by item, with **Outstanding** (what to buy) and the next delivery date.
2. Tick items (or **Select all**), or **add an item manually** (low-stock top-up).
3. Type the **Supplier name**, adjust quantities, **Place order** (one consolidated order).
4. **Placed orders** tab: **Mark received** when goods arrive.

[Screenshot: Supplier to-order + place order]

10. Discussion (talk to each other)

Where: Discussion (top menu).

- Post a message; **link it to an SO** so it's filed under that order.
- **@tag a person** or **@tag a whole location** (everyone there is notified).
- **Reply** to a message to quote it and notify the author.
- A **(chat) badge** on a Sales Order means there's discussion on it — click to open the thread.

[Screenshot: Discussion board]

11. The bell (notifications)

- Shows a count of new things for **your location**. Click to read; clicking one opens the right page.
 - You're alerted for: new orders, urgent orders, pick run released, order confirmed, goods received, finished goods delivered, and **@mentions** in Discussion.
-

12. Head Office — Approvals

Where: Pending Changes (the badge shows how many are waiting).

Approve/reject: sales-order changes, document deletes, item/SO changes, batch splits, stock adjustments, received-qty moves, run-mode changes, material-request cancellations, return edits, food-loss alerts.

Quick daily checklist

Role	Do this
Office	Upload SOs -> confirm to production -> mark urgent ones -> place supplier orders
Factory	Order Board -> raise materials -> receive goods -> print/send labels -> schedule packing -> record production
Warehouse	Release pick runs -> enter SO numbers -> record what you pick
Head Office	Clear Pending Changes
Everyone	Check the bell and Discussion

BAHAGIAN 2 — BAHASA MALAYSIA

EASWARI / AVINA — Panduan Pasukan Pengeluaran

Proses penuh, langkah demi langkah. Ikut peringkat mengikut urutan. Tanda [Screenshot] ialah tempat gambar akan dimasukkan kemudian. Nama butang dan menu dikekalkan dalam Bahasa Inggeris kerana itulah yang dipaparkan pada skrin.

0. Permulaan (semua orang)

Log masuk

1. Buka **production.srrieaswari.com** dalam pelayar (di telefon, guna Safari).
2. Masukkan **username** dan **password** -> **Login**.
3. Anda akan tiba di **Dashboard**. Bar biru di atas ialah menu:

Dashboard · Pending Changes · Discussion · Sales · Receiving · Production · Reports · Setup, dengan **loceng** dan nama anda di sebelah kanan.

4. Cip berhampiran nama anda menunjukkan akses anda: kod **kilang** (cth. AVINA 101) atau **Head Office** (boleh lihat semua).

[Screenshot: Dashboard selepas login]

Apa yang anda boleh lihat/buat

- Anda hanya nampak dan boleh ubah kerja untuk **lokasi anda sendiri**.
- Head Office boleh lihat semua kilang dan meluluskan perubahan.

Notifikasi telefon (telefon pejabat)

1. Buka laman dalam **Safari** -> **Share** -> **Add to Home Screen**.
 2. Buka aplikasi dari **ikon Home Screen** (bukan tab Safari).
 3. Tekan -> **Enable on this phone** -> **Allow**.
 4. Anda akan terima notifikasi walaupun aplikasi ditutup.
-

1. Sales Orders (Pejabat)

Di mana: Sales -> Sales Orders. **Siapa:** Pejabat. **Bila:** apabila pesanan pelanggan tiba.

A. Muat naik pesanan

1. Klik **Choose File**, pilih **PDF Sales Order** pelanggan, klik **Upload**.
2. Sistem akan baca pesanan dan senaraikannya di bawah **Uploaded Documents** dengan status (biasanya **Review**).

[Screenshot: Muat naik Sales Orders + senarai dokumen]

B. Semak baris (lines)

1. Cari dokumen (guna **Search file or item**, atau penapis **Location / Status / Issues**).

2. Klik **View Lines** untuk lihat setiap item, kuantiti, tarikh hantar, lokasi dan status.
3. Guna kotak **Search** atau penapis setiap lajur untuk cari item.

[Screenshot: Paparan baris dokumen]

C. Betulkan baris jika perlu

- **Sebelum lokasi itu confirm:** staf boleh tukar **Location** dan **Delivery Date** terus (tanpa kelulusan). Klik **Edit** pada baris. Head Office boleh tukar mana-mana medan.
- **Selepas confirm:** klik **Request change** — Head Office akan luluskan.
- Untuk pindah pesanan ke lokasi lain, tukar **Location** (kilang akan dikemas kini automatik).

[Screenshot: Panel Edit this line]

D. Pesanan segera (urgent)

- Klik **Mark urgent** pada dokumen. Ia bertukar merah dan kekal ditanda sepanjang proses, dan lokasi akan dimaklumkan.

E. Confirm to production

1. Skrol ke bahagian **Confirm to production**.
2. Setiap lokasi klik **Confirm <kilang> lines**. Baris itu akan dihantar ke **Order Board** kilang berkenaan.
3. Dokumen tidak boleh di-confirm selagi ada perubahan yang belum lulus (pending).

[Screenshot: Bahagian Confirm to production]

2. Order Board — rancang pengeluaran (Kilang)

Di mana: Production -> Order Board. **Siapa:** Perancang kilang. **Bila:** selepas baris di-confirm.

1. Pesanan yang telah di-confirm muncul sebagai **batch**. Tab di atas: **not requested yet / requested / in progress / done**. Tapis ikut **Factory**, tarikh hantar, atau **Sort**.
2. Tanda **Combine same item to run together** untuk kumpulan item yang sama jadi satu larian.

[Screenshot: Order Board dengan batch]

Mohon bahan (raise materials)

3. Klik **Materials** pada batch (atau kumpulan gabungan).
4. Pilih **Run mode**: *Auto machine* (roll) atau *Manual* (pieces) — ini menentukan pembungkusan yang diperlukan.
5. Jadual menunjukkan **Required vs Stock vs Shortfall**.
6. **Pesanan biasa:** klik **Raise Material Request**.
7. **Pesanan ad-hoc (pembungkusan berbeza, cth. plastik 1kg vs 5kg):** tanda **Customise materials (ad-hoc)** -> ubah kuantiti, **remove** baris, atau **add** bahan (cth. plastik 5kg) -> **Raise ad-hoc request**. Ini **tidak** mengubah resipi (BOM) yang disimpan.

[Screenshot: Tetingkap Material requirements + butang ad-hoc]

Jika nampak ! No BOM set: resipi belum ada — sediakan dahulu di Reports -> BOM.

3. Material Requests & gudang

Di mana: Receiving -> Material Requests.

Kilang / Head Office — release ke gudang

1. Permohonan baru terkumpul di bawah **Waiting to release** untuk setiap kilang.
2. Bila sedia, klik **Release to warehouse ->**. Ini menghantar satu **pick run** tetap; apa yang dimohon selepas itu menunggu release seterusnya.

[Screenshot: Waiting to release + butang Release]

Mohon bahan secara manual (ad-hoc / bukan dari batch)

1. Klik + **Request a material manually**.
2. (Pilihan) **Load from a product's recipe** — pilih produk + bilangan unit untuk isi resipi automatik, kemudian tukar plastik / ubah kuantiti.
3. Atau tambah item satu demi satu (cari item, masukkan qty, + **Add item**).
4. **Submit request** — ia akan masuk ke Waiting to release.

[Screenshot: Borang permohonan manual]

Gudang — pick dan rekod

1. Guna dropdown **Location** dan **Status** untuk cari run (New / SO entered / Partially received / Fully received).
2. Bagi setiap run yang di-release: taip **SO number**, klik **Save**.
3. Pick keseluruhan run dalam satu trip; taip **total received** bagi setiap bahan — ia akan dibahagi semula kepada permohonan asal secara automatik.

[Screenshot: Pick run, paparan gudang]

4. Goods Received / Terima Barang (Kilang / Gudang)

Di mana: Receiving -> Goods Received. **Bila:** apabila penghantaran tiba.

1. Klik **Choose File**, muat naik **PDF Delivery Order (DO)**, klik **Upload**. Sistem akan baca baris.
2. Klik **View Lines** (guna **Search** item jika senarai panjang).
3. Bagi setiap baris: **tanda QC**, tambah **gambar** (pilihan untuk Head Office), kemudian **Receive**. Boleh terima sebahagian dahulu, baki kemudian. Barang yang diterima akan **masuk ke stock**.
4. Kuantiti beg/karton ditukar ke KG secara automatik. Jika diminta, tetapkan **KG per bag** pada item.
5. Kuantiti salah? Guna **Correct received quantity**. Kod salah? Guna **Request edit**.

[Screenshot: Goods Received — QC/gambar/Receive]

5. Labels / Label (Kilang)

Di mana: Receiving -> Labels.

1. Label muncul di sini sebaik bahan mentah pesanannya diterima (peringkat **Material received**).
2. Masukkan **nombor batch / tarikh luput (expiry)** dan **kuantiti untuk cetak**, lampirkan **gambar** label yang dicetak -> peringkat bertukar **Printed**.
3. Tanda label -> **Send** -> kemudian **Receive -> stock** apabila tiba (masuk stock label).

4. Label sekali sahaja? + **Request a label manually** (pilih label, produk, qty, batch, expiry).

[Screenshot: Aliran Labels]

6. Packing Schedule / Jadual Pembungkusan (Kilang)

Di mana: Production -> Packing Schedule.

1. Bahagian: **Scheduled to pack -> Ready to pack -> Waiting for materials.**
2. Tetapkan **pack line**, **tarikh**, dan **run mode** bagi setiap batch.
3. Klik > **show materials** untuk lihat, bagi setiap bahan, **batch stock yang perlu diguna** (expiry paling awal dahulu). Batch yang ditempah untuk run itu ditanda * — **guna ini dahulu.**

[Screenshot: Packing Schedule + show materials]

7. Rekod pengeluaran (Line / QC)

Di mana: buka **Packing & Finished Goods Inspection Record** bagi batch tersebut.

1. **Date, Area/Line, Code, Product** diambil dari Packing Schedule dan **dikunci**. Jika ada yang salah, betulkan di **Packing Schedule** (tarikh bertukar merah jika bukan hari ini).
2. **Timer pengeluaran:** **Start** di permulaan, **Pause** untuk rehat, **Stop** di akhir.
3. **Materials used: batch & kuantiti telah diisi** dari yang ditempah. Laraskan **Qty used**; guna + **add batch** jika satu batch tidak mencukupi.
4. Isi pemeriksaan kualiti (sampel sealing, CCP2, metal detector, dll.).
5. Masukkan **Quantity produced -> Record production**. Ini akan **menolak bahan mentah dari stock** (expiry paling awal dahulu).
6. Jika **food loss melebihi 5%**, ia akan ditanda kepada Head Office secara automatik.

[Screenshot: Inspection record — header, timer, materials used]

8. Dihantar ke gudang / Delivery Orders

Di mana: Sales -> Delivery Orders.

1. Barang siap dihantar ke gudang di sini. Apabila dihantar, lokasi dimaklumkan dan baris pesanan bertukar **Delivered to warehouse**.

[Screenshot: Delivery Orders]

9. Membeli dari pembekal (Pejabat)

Di mana: Sales -> Supplier (to order).

1. Tab **To order**: item yang dihalakan ke SUPPLIER, dikumpul ikut item, dengan **Outstanding** (jumlah perlu dibeli) dan tarikh hantar terdekat.
2. Tanda item (atau **Select all**), atau **tambah item secara manual** (tambah stok yang rendah).

3. Taip **nama Pembekal (Supplier name)**, laraskan kuantiti, **Place order** (satu pesanan gabungan).
4. Tab **Placed orders: Mark received** apabila barang tiba.

[Screenshot: Supplier to-order + place order]

10. Discussion (berbincang sesama sendiri)

Di mana: Discussion (menu atas).

- Hantar mesej; **pautkan ke SO** supaya difailkan di bawah pesanan itu.
- **@tag seseorang** atau **@tag satu lokasi** (semua di situ akan dimaklumkan).
- **Reply** pada mesej untuk memetikinya dan memaklumkan penghantar.
- Lencana (**chat**) pada Sales Order bermaksud ada perbincangan — klik untuk buka.

[Screenshot: Papan Discussion]

11. Loceng (notifikasi)

- Menunjukkan bilangan perkara baru untuk **lokasi anda**. Klik untuk baca; klik satu untuk buka halaman berkaitan.
 - Anda dimaklumkan untuk: pesanan baru, pesanan segera, pick run di-release, pesanan di-confirm, barang diterima, barang siap dihantar, dan **@mention** dalam Discussion.
-

12. Head Office — Kelulusan

Di mana: Pending Changes (lencana menunjukkan bilangan menunggu).

Lulus/tolak: perubahan sales order, padam dokumen, perubahan item/SO, batch split, pelarasan stock, pindah kuantiti diterima, perubahan run-mode, pembatalan material request, suntingan return, amaran food-loss.

Senarai semak harian

Peranan	Buat ini
Pejabat	Muat naik SO -> confirm to production -> tanda urgent -> buat pesanan pembekal
Kilang	Order Board -> mohon bahan -> terima barang -> cetak/hantar label -> jadual pembungkusan -> rekod pengeluaran
Gudang	Release pick run -> masukkan SO number -> rekod apa yang di-pick
Head Office	Selesaikan Pending Changes
Semua	Semak loceng dan Discussion
